

ABHISHEK SWARNAKAR

Backend Developer | Node.js | TypeScript | REST APIs | AI-Integrated Systems
7987399373| abhishekswarnakar1472@gmail.com | <https://www.linkedin.com/in/abhishek-swarnakar> | <https://github.com/ryukyash2004>

CAREER SUMMARY

Computer Science undergraduate with hands-on experience developing backend systems, REST APIs, authentication workflows, and data-driven applications using Python, TypeScript, JavaScript, and SQL. Experienced in designing scalable backend services, structured data pipelines, API integrations, and cloud-ready applications using modern software engineering practices. Strong foundation in backend architecture, database systems, API lifecycle management, version control, and containerized deployments. Familiar with authentication mechanisms, secure data exchange, infrastructure concepts, and deployment workflows. Passionate about building reliable integration systems, backend services, and scalable applications that support real-world operational requirements.

PROJECTS

Backend API System with SQL Data Layer (Node.js, SQL, Authentication, Deployment)

- Designed and implemented RESTful APIs for structured data management and service integration.
- Built SQL-backed backend services with authentication, input validation, and error handling.
- Applied routing, schema design, and backend architecture principles to improve maintainability.
- Developed secure data access workflows and API communication patterns.

Health Infrastructure Platform (Next.js, TypeScript, TailwindCSS, AI Workflow)

- Developed a healthcare workflow platform supporting structured patient intake and diagnosis processes.
- Designed data collection and processing workflows for healthcare operations.
- Built modular application components supporting asynchronous workflow execution.
- Collaborated on system architecture emphasizing maintainability and scalability.

Rate Limiter (Python, Redis, Docker)

- Built a distributed rate-limiting system using Redis and token bucket algorithms.
- Implemented concurrency-safe backend logic for high-throughput environments.
- Added structured logging, testing, and Dockerized deployment workflows.

WORK EXPERIENCE

SECR (Southeast Central Railway)

Communications Department Trainee (June - July 2024)

- Gained exposure to network systems, communication protocols, and diagnostics.
- Learned structured documentation practices and system troubleshooting workflows.
- Experience valuable for reliable system design and technical support processes.

Resilience-Soft Technologies Pvt.

Ltd - Web Development Intern (Jul 10 – Aug 8, 2025)

- Collaborated with the engineering team to implement features for a functional e-commerce platform.
- Worked on API development, debugging UI issues, and integrating backend routes.
- Gained hands-on experience with version control, documentation, and code reviews.

Neon NextGeneration

Junior Web Developer & Junior Product Developer (feb – April 2026)

- Maintained and enhanced production web applications using Next.js, TypeScript, and TailwindCSS.
- Participated in debugging, deployment support, and system maintenance activities.
- Worked with virtualized environments using Proxmox and VM-based infrastructure.

SKILLS AND STRENGTHS

Backend Development Node.js, REST APIs, Authentication Systems, Backend Architecture SQL
Programming, JavaScript (ES6), TypeScript, Python, SQL
AI & Data AI-assisted Applications, LLM Workflows, Retrieval

Concepts Intelligent Automation, Data Pipelines
Tools & Platforms Git, GitHub, Docker, Linux, Proxmox
Cloud Azure Fundamentals
AI & Data AI-Assisted Applications, LLM Workflows Data Pipeline

EDUCATION

Amity University Chhattisgarh

B. Tech in Computer Science & Engineering (2022 - Present)

CERTIFICATIONS

Machine Learning with Python: Internshala trainings
Intro to Python: Infosys springboard

Artificial Intelligence in industrial management: NPTEL
AdvanceData Manipulation in studio: UI-path

INTERESTS

Agentic AI systems • Data engineering • AI automation • Enterprise workflows • ETL
